

Mobile Lex Autolease interactive

Manage essential company vehicle needs from a web-enabled mobile phone.

Our new iPhone app and mobile website gives your drivers access to key services and features when they are out of the office.

Our product.

Mobile Lex Autolease interactive (Mobile LAi) has been created to work on all web-enabled mobile phones allowing your drivers to manage their company vehicle at their convenience.

Mobile LAi offers:

- Access the full range of What Car? reviews
- Book a service, MOT or repair
- Request replacement tyres and glass
- Report an accident as soon as it happens
- Be directed to the nearest Kwik-Fit centre via geolocation services (iPhone app only).
- Receive immediate assistance in the event of an accident, breakdown or emergency via the 'Help me now' button
- Request a European travel pack
- Request a quote to buy their vehicle at the end of contract.

The benefits.

Both our easy-to-use iPhone app and our new mobile website are packed with features making managing a company car easier while out of the office.

Forms for booking services/MOTs, replacement tyres or glass, European travel packs, reporting an accident, etc. can be submitted in seconds (and are even pre-populated with driver's details on iPhones). Users can easily indicate tyres for replacement or areas of accidental damage using simple diagrams.

iPhone users are also able to use geolocation technology to find their nearest Kwik-Fit centre making tyre replacement straightforward, even in unfamiliar locations. Users can also see how to read specifications from the tyre side walls making ordering a replacement even easier.

If drivers need immediate assistance they can use the 'Help me now' button which connects to our technical team in the event of an accident, breakdown or emergency.

It can also help make choosing a new vehicle easier too. What Car? reviews cover every vehicle manufacturer, model and variant.

How it works.

Mobile LAi can be used by anyone who has a web-enabled mobile phone. It is available to download free from the App Store for iPhone users or as a mobile version of the web for users of Blackberry, Nokia and other smart phones.
